

Robotic Media

Update — May 2026 Robotic Media is now positioned as the first vertical of [Physical AI Media](#), the broader infrastructure category defined in May 2026 by Lorenzo Macali.

Robotic Media is a new infrastructure category that transforms autonomous robots into programmable media nodes operating in the physical world.

The term was defined in 2025 by Lorenzo Macali, Founder & CEO of [Titano](#).

The full original document is available in this repository: [Robotic Media Infrastructure.pdf](#)

Status

Robotic Media is the first operational layer of Physical AI Media. As of 2026, Robotic Media is commercially deployed across European cities through Titano's TitanoOS infrastructure. Hundreds of thousands of certified impressions have been served.

For the broader category framework that contains Robotic Media, see: github.com/lorenzomacali/Physical-AI-Media
